EN

The OPAL / OPAL Plus detector allows detection of motion in the protected area. It is designed for outdoor use. This manual applies to the detector with electronics version E (newer) and firmware version 2.01 (or newer).

FEATURES

- Passive infrared (PIR) sensor and microwave sensor.
- Digital temperature compensation.
- Digital temperature compensation.
- Immunity up to 20 kg.
- Immunity to false alarms caused by moving but not changing their position (e.g. branches of trees).
- Cross talk protection.
- Microwave based anti-mask feature.
- Dusk sensor (OPAL Plus).
- Capacity of separate sensor configuration.
- Supervision of the remote control configuration mode (OPT-1 keyfob).
- Three LED indicators.
- Remote LED enable/disable.
- Remote control configuration mode selectable.
- Supervision of signal path and supply voltage.
- Temper protection against cover removal and testing enclosure from the wall.
- Weatherproof enclosure featuring a very high mechanical strength.

DESCRIPTION

The alarm will be triggered when infrared sensor (PIR) and microwave sensor detect motion within a time period shorter than 1 second.

Anti-mask feature

Detection of the microwave sensor of an object moving at a distance of 10-20 centimeters from the detector is interrupted as an attempt to mask the detector and result in activation of anti-mask relay for two seconds. Objects perceive the microwaves, but nothing is detected by the infrared radiation due to the anti-mask feature.

Supervision features

In the event of a voltage drop below 9 V (±5%) for more than 2 seconds or the signal path failure, the detector will signal trouble. The trouble is indicated by the actuation of alarm relay and the steady light of all LED indicators. The trouble signaling will continue as long as the trouble persists.

Power LED enable/disable

The LED indicator is disabled remotely when the LED is enabled by means of the timer. The LED terminal is provided to allow remote LED enable/disable. Battery life depends entirely on the type of battery used.

The LED indicator is controlled by the remote control configuration mode (see "Detector configuration").

Dust sensor

When the dust sensor is activated, the remote control configuration mode (see "Detector configuration") is disabled.

Supervision of signal path and supply voltage

Supervision of the signal path and supply voltage.

Temper protection

Protection against cover removal and testing enclosure from the wall.

Weatherproof enclosure

Weatherproof enclosure featuring a very high mechanical strength.

SPECIFICATIONS: OPAL / OPAL Plus

| | |
|--|--|
| Supply voltage | 12 V DC ±15% |
| Standby current consumption | OPAL 12 mA OPAL Plus 15 mA |
| Maximum current consumption | OPAL 20 mA OPAL Plus 20 mA |
| Relay contacts rating (resistive load) | 40 mA / 16 V DC 50 mA / 12 VDC |
| Memory rating (OC type output) | 24 GHz |
| Defective frequency | 0.3...3 m/s |
| Alarm signalling period | 2 s |
| Warm-up period | 40 s |
| Recommended installation height | 2.4 m |
| Security grade | Grade 2 |
| Standards complied with | EN50131-1, EN50130-4, EN50130-5 |
| IP code | IIIa |
| Environmental class according to EN50130-5 | IIIa |
| Operating temperature range | -40...+55 °C |
| Maximum humidity | 93±3% |
| Dimensions | 65 x 138 x 58 mm |
| Detector weight | OPAL 174 g (without a bracket) OPAL Plus 176 g |
| | |

SPECIFICATIONS: OPT-1

| | |

INSTALLATION

- A** Disconnect power before making any electrical connections. If the detector is to be immune, it should be mounted at 2.4 m height with no vertical tilt. It is especially important when mounting on a wall bracket.
- Install the detector at the recommended height (Fig. 3).
 - If traffic or objects moving out of the protected area cause an alarm, move the detector slightly downwards or remove the detector sensitivity (Fig. 3).
 - Install the detector so that the expected movement of an intruder will be across the coverage pattern (Fig. 3).
 - Install the detector so that the distance between the moving objects (eg trees, bushes, laundry etc.) (Fig. 3).
 - Don't install the detector on surfaces or fans or a heat source (Fig. 3).
 - Don't install the detector in the enclosure, it is advisable to place them in a heat shrink tube. It reduces the risk of getting water into the enclosure.
 - In general do not use cables into the enclosure, it is advisable to place them in heat shrink tube. It reduces the risk of getting water into the enclosure.

i

| Light intensity [lx] | | |
|----------------------|--------------------------------|----------------------------------|
| Detection threshold | Turning on [P_{on}] | Turning off [P_{off}] |
| minimum | 10 | 170 |
| default | 25 | 100 |
| maximum | 30 | 80 |

i

All parameters set in the configuration mode are written in the detector non-volatile memory and are retained even after power loss.

If the detector is to be immune, the for the infrared and microwave sensors do not set the detection sensitivity higher than default.

i

Starting configuration mode

Press MODE button on the detector electronics board for 2 seconds or apply the command **OPAL** to start the configuration mode. The LED starts to blink, it means that you can configure the sensitivity of the microwave sensor.

Signaling in the configuration mode

The signal of the detector is sent to the receiver via the common ground wire.

i

Signal of the detector is sent to the receiver via the common ground wire.
